

Technical Specifications Double Wall Duct

Technical properties

Properties	Values
Thermal transmittance (U)	0,0202 W/mak.
Thickness of air air layer	2 inch
Diameters of usage (in)	from 8 and up
Application temperature	10°C - 60°C

Concentric (Conduction)

This application consists of producing isolation by means of an internal and external duct, which together form a layer of air to prevent condensation and heat transfer from the environment to the interior of the duct, in which the values of air temperature are maintained during the conduction and distribution of the system.
