

High Pressure Ventilation

Ducts designed for high pressure loads for use in the mining industry can be supplied upon request.

Aeroflex 14oz. It is the most optimal material for ventilation systems that have high demands on strength and durability. It is a material composed of frames of polyester fibers coated on both sides with PVC films of different densities, which provides unrivaled strength and durability. The combination of screening and coating density allow for an unsurpassed mechanical strength.

Areas of Application:

- Spaces that require conducting extraction of air dust.
- Underground Ventilation
